## FOREWORD

This report sets forth in tabular form data collected over the life of this Commission on each of the over six hundred local public water suppliers, both municipal and private, in Southeastern New York.

The information contained herein has been used in the preparation of other Commission reports. It also can be used as a source document by others concerned with the water supply situation in Southeastern New York.

E. Virgil Conway  
E. Virgil Conway, Chairman

## SCOPE OF THIS REPORT

### INTRODUCTION - THE MANDATE

Recognizing that the future economic growth and physical well-being of the Southeastern portion of New York State, including the City of New York and the counties of Nassau, Suffolk, Westchester, Rockland, Putnam, Orange, Ulster and Dutchess will require the development of vast new sources of water and related water supply facilities and noting that early, comprehensive planning is essential if the long range needs of this area for adequate water supply facilities are to be met with due regard for conservation, natural beauty, cost and the most equitable and efficient utilization of the water and other natural resources of the State of New York, the Legislature in 1969 directed that a study of the situation be made. Among the specific recommendations that this Commission was directed to make are:

- 1) alternatives for the development of additional water supply facilities, and
- 2) alternatives for financing and administering the construction, operation and maintenance of the facilities, including governmental structures and a delineation of the areas of proper state and local responsibilities.

### RESPONSE TO THE MANDATE

#### ESTABLISHING WATER SUPPLY NEEDS

In order to accomplish its tasks the Commission had to determine the strengths and weaknesses of water supply services in Southeastern New York. To do this, it had to ascertain the safe yield or well capacity and the excess or deficit of each water supply system in the Region. This was accomplished and the resulting infor-

mation was shown in tabular form in this Commission's Scope of Public Water Supply Needs report. That same information is also shown in this report for increased usability. This information, coupled with population projections for the Region, led to a set of forecasts of publicly supplied water supply needs by county, forecasts that were also contained in that report.

#### ESTABLISHING SYSTEM FINANCIAL STRENGTH

In addition to establishing the physical capability of the 608 water supply systems in the Region to deliver sufficient quantities of water, the Commission attempted to ascertain the financial strength of the systems by documenting costs, revenues and surpluses or deficits. Because a discussion of these matters can be found in other publications of this Commission, ways in which deficits are met or the uses to which surpluses are put in the various types of systems are not discussed here.

#### System Costs

Tables have been developed which reflect system costs, broken down into operation and maintenance, debt service, operating taxes and other costs. Furthermore, operation and maintenance costs are divided into the following components -- administration, power and pumping at the source, purification, and transmission and distribution.

#### System Revenues

Revenues have been divided into the following components -- water sales, real property taxes, assessments, service charges, and other revenues. These components have also been shown in tabular form for each of the Region's water supply systems.

#### System Surpluses or Deficits

Revenues were then compared to costs in each of the systems and the resulting surpluses or deficits noted. These surpluses or deficits were compared to the capital investment and outstanding indebtedness, if any, of the systems to acquire a more complete picture of the financial state of each system.

To afford more meaningful comparisons among water systems, some of which serve hundreds of thousands of people and others of which serve less than one hundred, costs and revenues were reduced to a common denominator of one million gallons for all systems. Thus, New York City's water costs, for a system serving over seven million people, can be seen to be quite modest while those of most of the remaining systems are by comparison quite high.

### Bear in Mind

The reader is cautioned that figures on costs, revenues and surpluses or deficits are for one year. A surplus one year can be a deficit the next. Furthermore, deficits in city and village water systems are normally covered by monies in the general fund. Similarly, surpluses in such systems are often used for other than water supply purposes. Costs and revenues in town water districts must by law be equal -- they may be somewhat different for any year but over a period of time they must balance. Investor-owned systems, of course, should normally show some surplus, the rate of return being regulated by the state Public Service Commission. Though the figures are for one year, they do reflect the existing financial situation on the local level.

### COST TO THE CONSUMER

Cost to the consumer, based on equal usage of 100,000 gallons per customer per year, was determined for each of the Region's water supply systems. Cost to consumers within the system as well as that to customers outside the system have been noted. Like costs and revenues, cost of water to the consumer varies widely from system to system. More is said about this situation in other reports of this Commission.

### LEGAL DATA

Concomitant with the development of data reflecting the systems' physical capacity for meeting water supply needs and their financial situations, was the production of information concerning the legal basis for each system and the functions, i.e., supply and/or distribution which it performs. This was also tabulated.

### MATERIAL INCLUDED

The information briefly discussed in previous paragraphs was used extensively in the preparation of many of this Commission's reports. It is included herein in tabular form arranged by county and alphabetically by system within each county. The data are the most complete and up-to-date that can be found. Tables included are:

- Table 1 -- Summary of Legal Data
- Table 2 -- Operating Data on Public Water Supply Systems
- Table 3 -- Costs of Water
- Table 4 -- Operation and Maintenance Costs

**Table 5 -- Revenues**

**Table 6 -- Summary of Financial Data**

**Table 7 -- Average Costs and Revenues Per  
Million Gallons**

**Table 8 -- Cost to the Consumer**

**PURPOSE OF THIS REPORT**

It is hoped that this report will be put to use as a resource document by others interested in the water supply situation in Southeastern New York. It is with that in mind that this report is published.
